Descrizione fisica	1 online resource (369 pages)
Disciplina	658.421
Soggetti	Entrepreneurship New business enterprises - Environmental aspects Communities - Social aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"The Startup Community Way is a sequel to Startup Communities: Building an Entrepreneurial Ecosystem in Your City. It picks up where Startup Communities left off, looking at why makes startup communities thrive -- anywhere. The Startup Community Way advances the practice of startup community building in several key ways: Establishes the very notion of a startup community. Provides an intro to relevant historical frameworks: agglomeration, networks, creative class Establishes the Boulder Thesis: a governing philosophy for startup communities. Discusses the role of key stakeholders (leaders and feeders), what can go wrong (Classical Problems and Myths), why a community matters (Power of Community and Broadening), and why leaders are the key to bringing it all together (Attributes of Leadership). Offers a ton of practical advice along the way, aimed primarily at entrepreneur community builders. Expands the Boulder Thesis to benefit nascent startup communities or those in an international context. Discusses es the role of government (national, regional, local, international) in startup communities -- they can and do play a big role, particularly outside of the United States. Provides a framework or

model for assessing and measuring the "maturity" of a particular startup community--"Where are we?" and "How do we get where we need to go?" Shares lessons that will be more generalizable across geographies and will tell lots of stories from around the United States and other countries. ?SCW will go deeper on other universities, other non-tech stuff, and structural dynamics (like technology transfer, patents, rules of engagement for students). It ill also develop a more robust framework for assessing and measuring a startup community (ranges from quality and types of stakeholders and assets to improving linkages and changing culture). ?Having the benefit of 6+ years to look back upon, SCW will have examples to draw upon from cities around the world -- a look back at what we have learned in the last half decade. In that regard, we'll have many more outside voices (contributors) in this book compared with SC1. ?The main new intellectual contribution of SCW is the introduction and application of "complex systems" theory into the practice of startup community building. SC1 is steeped in complexity theory, though does not go deep on explaining the implications of complex systems and how that justifies our recommendations (which differ widely from more traditional approaches). ?SCW will have a more robust/concise practitioners guide at the end"--

Research Application.

Sommario/riassunto

With the goal of perfecting the national governance system and raising the country's governance capability, this book systematically analyzes the characteristics and trajectory of China's economic expansion and structural adjustment, while also assessing a variety of short-term debt and long-term economic performance and financial risks. In addition to discussing the market-oriented reform process at the stage of economic development, institutional and structural characteristics, it presents research on the country as a whole, its residents, non-financial corporations, financial institutions and central banks, the central government, local government, and other external sectors. On the basis of extensive data, the book analyzes the national and sectoral balance sheets in China and explores a number of major issues the country is currently facing, such as sustainable development, government restructuring, local debt, welfare reform, openness and stability of the financial system, etc., as well as suitable policy measures and institutional arrangements for addressing them.
