

1. Record Nr.	UNISA996466747203316
Titolo	The human factor in the settlement of the Moon : an interdisciplinary approach / / Margaret Boone Rappaport, Konrad Szocik, editors
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
ISBN	3-030-81388-6
Descrizione fisica	1 online resource (315 pages)
Collana	Space and society (Springer (Firm))
Disciplina	629.47
Soggetti	Lunar bases Space flight to the moon Moon Exploration
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.

2. Record Nr.	UNINA9910795372703321
Titolo	Drivers of landscape change in the Northwest Boreal Region // editors, Amanda L. Sesser [et al.]
Pubbl/distr/stampa	University of Alaska Press Fairbanks, AK : , [2019]
ISBN	1-60223-398-5
Descrizione fisica	1 online resource (337 pages)
Classificazione	SCI019000
Disciplina	304.209798
Soggetti	Environmental protection - Alberta - Northwest Boreal Region Environmental protection - Alaska Landscape protection - Alberta - Northwest Boreal Region Landscape protection - Alaska
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	"The Northwest Boreal (NWB) Landscape Conservation Cooperative (LCC) was formed in 2012 to bring together conservation and resource managers in boreal Alaska and northwest Canada with the central purpose of sharing interests and resources to collectively address landscape level issues that are common among resource managers, educators, and the public. As outlined as part of the NWB LCCs strategic plan (http://nwblcc.org/wp-content/uploads/2015/05/NWB-LCC-Strategic-Plan-V1.pdf) this document will provide a foundation by which members of the LCC and other interested parties can find baseline information regarding physical and ecological aspects of the region, as well as potential drivers of landscape change in an area that spans over 1.3 million square kilometers (330 million acres) across Alaska and Canada. This work is the culmination of more than 60 contributing authors engaged in a wide spectrum of study, including physical and biological aspects of the region; natural disturbances; social-ecological drivers; interactions among the natural and anthropogenic characteristics; and engagement among and between scientists and public. This document may well serve as a baseline

through which future meaningful engagement with the LCC can take place"--
