	Sommario/riassunto	"Historically the bodies of civilians are the most damaged by the increasing mechanization and derealization of warfare, but this is not reflected in the representation of violence in popular media. In War Without Bodies, author Martin Danahay argues that the media in the United States in particular constructs a "war without bodies" in which neither the corpses of soldiers or civilians are shown. War Without Bodies traces the intertwining of new communications technologies and war from the Crimean War, when Roger Fenton took the first photographs of the British army and William Howard Russell used the telegraph to transmit his dispatches, to the first of three "video wars" in the Gulf region in 1990-91, within the context of a war culture that made the costs of organized violence acceptable to a wider public. New modes of communication have paradoxically not made more war "real" but made it more ubiquitous and at the same time unremarkable as bodies are erased from coverage. Media such as photography and

instantaneous video initially seemed to promise more realism but were assimilated into existing conventions that implicitly justified war. These new representations of war were framed in a way that erased the human cost of violence and replaced it with images that defused opposition to warfare. Analyzing poetry, photographs, video and video games the book illustrates the ways in which war was framed in these different historical contexts. It examines the cultural assumptions that influenced the reception of images of war and discusses how death and damage to bodies was made acceptable to the public. War Without Bodies aims to heighten awareness of how acceptance of war is coded into texts and how active resistance to such hidden messages can help prevent future unnecessary wars"--

| Sommario/riassunto | The book explores finely-grained distinctions in causal meaning, mostly from a relevance-theoretic perspective. To increase the challenge of this double task, i.e. a thorough as well as satisfactory account of cause and a detailed assessment of the theoretical model employed to this end, the current study involves an investigation carried out by way of contrasting the prototypical causal exponents of Modern Greek subordination, i.e. epeidi and ?iati. In addition, this objective is achieved in the methodological framework of contrasting a range of contextual applications of the tw |
