

1. Record Nr.	UNINA9910795622303321
Autore	Lamdan Sarah
Titolo	Data Cartels : The Companies That Control and Monopolize Our Information // Sarah Lamdan
Pubbl/distr/stampa	Stanford, California : , : Stanford University Press, , [2023] ©2023
ISBN	1-5036-3372-1
Edizione	[First edition.]
Descrizione fisica	1 online resource (227 pages)
Classificazione	AK 54325
Disciplina	343.730999
Soggetti	Antitrust law - United States Cartels - United States Data protection - Law and legislation - United States Freedom of information - United States Information services industry - Law and legislation - United States Information services industry - Social aspects - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di bibliografia	Includes bibliographical references (pages 145-195) and index.
Nota di contenuto	Introduction : the data cartels : an overview -- Data brokering -- Academic research -- Legal information -- Financial information -- News -- Conclusion : envisioning public information as a public good.
Sommario/riassunto	"In our digital world, data is power, and information hoarders reign supreme. The practices of these digital pillagers are analogous to those of cartels--they use intimidation, aggression, and force to maintain control and power. Sarah Lamdan brings us into the unregulated underworld of the "data cartels," demonstrating how the entities mining, hoarding, commodifying, and selling our data and informational resources perpetuate social inequalities and threaten the democratic sharing of knowledge. The companies at the center of this book are not household names like Google. They fly under the radar and self-identify as "data analytics" or "business solutions" operations. These companies supply the digital lifeblood that flow through the circulatory system of the internet. With their control over data, they can prevent the free flow of information to places where it is needed, and simultaneously distribute private information to predatory entities. Just

a few companies dominate most of our critical informational resources, from scientific research and financial data to the law. They are also data brokers, selling our personal data to law enforcement and other government agencies that determine whether we should be eligible for social services, and they sell "risk" products that insurance companies, employers, landlords, and healthcare systems use to make decisions. Alarmingly, everything they're doing is perfectly legal. Ranging from small information firms to billion-dollar data giants like Thomson Reuters and RELX Group, these companies masterfully exploit outdated information and privacy laws, curating online information in a way that amplifies digital racism and targets marginalized communities. In this book, Lamdan contends that privatization and tech exceptionalism have prevented us from creating effective legal regulation. Lack of legal intervention has allowed oversized information oligopolies to coalesce. In addition to specific legal and market-based solutions, Lamdan calls for treating information like a public good and creating digital infrastructure that supports our democratic ideals"--
