Emerging norms : transparency and anti-corruption -- Chapter XI. Frontier technologies : synthetic biology, cyber space, digital currencies -- Chapter XII. Accountability -- Chapter XIII. Accountability and international organizations -- Chapter XIV. Accountability in the global supply chain -- Chapter XV. Looking to the future -- Select Bibliography.
Sommario/riassunto	We live in a kaleidoscopic world in the new Anthropocene Epoch. This calls for a more inclusive public international law that accepts diverse actors in addition to States and other sources of law, including individualized voluntary commitments. Norms are critical to the stability and legitimacy of this international system. They underlie responses to rapid change, to new technological developments and to problems of protecting commons, promoting public goods, and

providing social and economic justice. Certain fundamental norms can be identified ; others are emerging. The norm of mutual accountability underpins the implementation of other norms. Norms are especially relevant to frontier do-it-yourself technologies, such as synthetic biology, digital currencies, cyber activity, and climate interventions, as addressed in the book. Reconceiving public international law lessens the sharp divide between public and private law and between domestic and international law.
