Sommario/riassunto	Remedicalizing Cannabis discovers the historical ins and outs of cannabis as a botanical product with medical applications. Addressing questions about patient access, the effectiveness of international drug

control systems, and the role of expert advice, it reveals how we have arrived at the current classification of cannabis as a medical product.

Sommario/riassunto	Addressing classical material as well as new perspectives, Instabilities of Flows and Transition to Turbulence presents a concise, up-to-date treatment of theory and applications of viscous flow instability. It covers materials from classical instability to contemporary research areas including bluff body flow instability, mixed convection flows, and application areas of aerospace and other branches of engineering.

Transforms and perturbation techniques are used to link linear instability with receptivity of flows, as developed by the author.
