

1. Record Nr.	UNINA9910795920803321
Titolo	Learning from megadisasters : lessons from the Great East Japan Earthquake // Federica Ranghieri and Mikio Ishiwatari, editors
Pubbl/distr/stampa	Washington, DC : , : World Bank, , [2014] 2014
ISBN	1-4648-0154-1
Descrizione fisica	1 online resource (xxiii, 363 pages) : color illustrations, color maps ; ; 28 cm
Disciplina	363.348
Soggetti	Emergency management Risk management Natural disasters
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Cover; Contents; Forewords; Acknowledgments; Abbreviations; Overview: Lessons from the Great East Japan Earthquake; MAPS; Map 0.1 The tsunami struck a wide area of Japan; TABLES; Table 0.1 The Great East Japan Earthquake of 2011 in figures; FIGURES; Figure 0.1 Summary of findings and lessons learned from the project; Figure 0.2 The many roles of the community in multihazard DRM; Figure 0.3 Dikes in Sendai before and after the tsunami of March 11, 2011; Figure 0.4 Otsuchi's mayor was in front of town hall when the tsunami struck; Figure 0.5 Broadcasting at RINGO Radio Map 0.2 Actual inundation areas were much larger than predicted Figure 0.6 Community rehabilitation facilitator; PART I: STRUCTURAL MEASURES; Chapter 1: Structural Measures Against Tsunamis; BOXES; Box 1.1 The enormous tsunami walls of Taro, Miyako City, Iwate Prefecture; Figure 1.1 Inundation area in Fudai Village, Iwate; Figure 1.2 No tsunami inundation in Hirono Town, Iwate; Map 1.1 Determining dike height; Figure 1.3 Effectiveness of the Kamaishi tsunami breakwater; Figure 1.4 Countermeasures against level 1 and level 2 tsunamis; Figure 1.5 Structure of a highly resilient breakwater Map 1.2 Tsunami inundation area along the Kitakami and Kyu-Kitakami

rivers Chapter 2: Building Performance; Figure 2.1 Share of houses that collapsed in the 1995 Kobe earthquake, by year of construction; Table 2.1 Comparison of three major disasters in Japan; Figure 2.2 Houses and cars were washed away by the tsunami; Figure 2.3 The tsunami destroyed the outer walls of steel structures; Table 2.2 Damage to buildings following the GEJE; Figure 2.4 Reinforced concrete building withstood tsunami even though submerged; Figure 2.5 Reinforced concrete building damaged by buoyancy
Figure 2.6 Reinforced concrete building scoured by the tsunami current
Figure 2.7 Overturned building of reinforced concrete with pile foundation; Figure 2.8 Fallen ceiling panels in school gymnasium;
Figure 2.9 Subsidence of houses from liquefaction; Figure 2.10 Houses damaged by failure of retaining walls; Figure 2.11 Revised design load requirements against tsunamis; Figure 2.12 Collapsed school building in which furniture is still standing (Yogyakarta province, following Central Java Earthquake, 2006)
Box 2.1 A simple technical guideline and its dissemination through the building permit process in Indonesia Figure 2.13 Flowchart illustrating the Japanese building permit process; Box 2.2 Tsunami evacuation shelters applying the Japanese technical guideline; Chapter 3: Hydrometeorological Disasters Associated with Tsunamis and Earthquakes; Figure 3.1 Countermeasures taken against hydrometeorological disasters following the GEJE; Figure 3.2 Damage to river dikes at Narusegawa; Map 3.1 Subsidence caused by the earthquake increased inundation risks; Figure 3.3 Rehabilitation of coastal dikes

Chapter 4: Multifunctional Infrastructure

Sommario/riassunto

While not all natural disasters can be avoided, their impact on a population can be mitigated through effective planning and preparedness. These are the lessons to be learned from Japan's own mega-disaster: the Great East Japan Earthquake of 2011, the first disaster ever recorded that included an earthquake, a tsunami, a nuclear power plant accident, a power supply failure, and a large-scale disruption of supply chains. It is a sad fact that poor communities are often hardest hit and take the longest to recover from disaster. Disaster risk management (DRM) should therefore be taken into account
