1. Record Nr.   UNINA9910795993203321

   Autore   Hill Mike <1964->

   Titolo   On posthuman war : computation and military violence / / Mike Hill

   Pubbl/distr/stampa Minneapolis, Minnesota ; ; London : , : University of Minnesota Press, ,
                       [2022]
                       ©2022

   ISBN   1-4529-6744-X
                      1-4529-6948-5

   Descrizione fisica 1 online resource (260 pages)

   Disciplina   355.80285

   Soggetti   Artificial intelligence - Military applications
                      Military art and science - Technological innovations - United States
                      War (Philosophy)

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Includes index.

   Nota di contenuto Introduction: number rules -- The terrorist recognition handbook --
                      Cybernetics and netcentric war -- The lords of things as they are --
                      Realism and posthuman war -- System-of-systems -- War
                      demography -- The revolution in military affairs -- U.S. Census politics
                      and the coming white minority -- The graveyard of the human race --
                      Race war -- The algorithmic unconscious -- War anthropology -- The
                      human terrain system program -- Data as physical transmission --
                      National character study in World War II -- Counterinsurgency theory
                      and Vietnam -- Quantum systems and asymmetrical war -- White
                      Afghans -- War neuroscience -- The functional combatant -- Living
                      matter -- Cartography and virtual reality -- The human brain as image
                      generator -- Opto-electronics -- Virtuality and war -- White matter.

   Sommario/riassunto "Mike Hill delivers insights on the latest war technologies, strategies,
                       and tactics while engaging in questions poised to overturn the
                       foundations of modern political thought. Beginning with his personal
                       experience training U.S. Marine recruits, he gleans insights from realist
                       philosophy, the new materialism, and computational theory to show
                       how the human being has been reconstituted from neutral citizen to
                       unwitting combatant"--
