| Sommario/riassunto      | Here, translated into modern idiom, are many works of the authors whose ideas have constituted the mainstream of classical thought. This volume of new translations was born of necessity, to answer the needs of a course in Greek and Roman culture offered by the Department of Integrated Liberal Studies at the University of Wisconsin.   |

Chinese writing came about and showcases the long history of Chinese theories of language. 'Ideography' as such assumes extra-linguistic, trans-historical, universal 'ideas' which are an outgrowth of Platonism and thus unique to European history. Classical Chinese discourse assumes that language (and writing) is an arbitrary artifact invented by sages for specific reasons at specific times in history. Language by this definition is an ever-changing technology amenable to historical manipulation; language is not the House of Being, but rather a historically embedded social construct that encodes "idiot human intentions and nothing more. These are incommensurate epistemes, each with its own cultural milieu and historical context. By comparing these two traditions, this study historicizes and decolonializes popular notions about Chinese characters, exposing the Eurocentrism inherent in all theories of ideography. Ideography and Chinese Language Theory will be of significant interest to historians, sinologists, theorists, and scholars in other branches of the humanities.

| Sommario/riassunto      | This book unifies the different approaches in studying elliptic and parabolic partial differential equations with discontinuous coefficients. To the enlarging market of researchers in applied sciences, mathematics and physics, it gives concrete answers to questions suggested by non-linear models. Providing an up-to date survey on the results concerning elliptic and parabolic operators on a high level, the authors serve the reader in doing further research.; Being themselves active researchers in the field, the authors describe both on the level of good examples and precise analysis, the crucial role played by such requirements on the coefficients as the Cordes condition, Campanato's nearness condition, and vanishing mean oscillation condition. They present the newest results on the basic boundary value problems for operators with VMO coefficients and non-linear operators with discontinuous coefficients and state a lot of open problems in the field. |
