

1. Record Nr.	UNINA9910797047903321
Titolo	Realizing the potential of the American Community Survey : challenges, tradeoffs, and opportunities / / National Research Council
Pubbl/distr/stampa	Washington, District of Columbia : , : The National Academies Press, , 2015 ©2015
ISBN	0-309-36681-X 0-309-36679-8
Descrizione fisica	1 online resource (313 pages) : illustrations (some color), charts, tables
Disciplina	317.30723
Soggetti	Demographic surveys - United States United States Census
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Vision for the American community survey -- Sample design and precision of estimates -- Data collection methods -- Data processing and analytic issues -- Data dissemination -- Survey content -- Appendixes: A. Usability analysis: tract-level 2008-2012 ACS data -- B. Examples of differences between census counts and ACS population estimates -- C. Data quality filtering rates, 1-year data, 2012* -- D. Data quality filtering rates, 3-year data, 2010-2012* -- E. 2014 American community survey mail questionnaire -- F. ACS questions by year introduced and agency -- G. Biographical sketches of panel members and staff.
Sommario/riassunto	"The American Community Survey (ACS) was conceptualized as a replacement to the census long form, which collected detailed population and housing data from a sample of the U.S. population, once a decade, as part of the decennial census operations. The long form was traditionally the main source of socio-economic information for areas below the national level. The data provided for small areas, such as counties, municipalities, and neighborhoods is what made the long form unique, and what makes the ACS unique today. Since the successful transition from the decennial long form in 2005, the ACS has become an invaluable resource for many stakeholders, particularly

for meeting national and state level data needs. However, due to inadequate sample sizes, a major challenge for the survey is producing reliable estimates for smaller geographic areas, which is a concern because of the unique role fulfilled by the long form, and now the ACS, of providing data with a geographic granularity that no other federal survey could provide. In addition to the primary challenge associated with the reliability of the estimates, this is also a good time to assess other aspects of the survey in order to identify opportunities for refinement based on the experience of the first few years. Realizing the Potential of the American Community Survey provides input on ways of improving the ACS, focusing on two priority areas: identifying methods that could improve the quality of the data available for small areas, and suggesting changes that would increase the survey's efficiency in responding to new data needs. This report considers changes that the ACS office should consider over the course of the next few years in order to further improve the ACS data. The recommendations of Realizing the Potential of the American Community Survey will help the Census Bureau improve performance in several areas, which may ultimately lead to improved data products as the survey enters its next decade."--Publisher's description.
