   Sommario/riassunto   A significant global transformation must take place in order to increase food production by 70% by 2050, a figure the UN's Food and Agriculture Organization (FAO) estimates is needed to feed the world's future population. This is not an easy task, however, as agriculture is faced with a number of major challenges. Therefore, it is important that issues regarding food security, stability, sustainability, investment, innovation, multi-stakeholder partnerships, governance, etc., are addressed. The International Agricultural Risk, Finance, and Insurance
