1. Record Nr. UNINA9910797445503321

Titolo	Metal-carbon bonds in enzymes and cofactors / / edited by Astrid Sigel, Helmut Sigel, and Roland K.O. Sigel
Pubbl/distr/stampa	Cambridge, UK : , : RSC Publishing, , 2009
ISBN	3-11-043658-2
Descrizione fisica	1 online resource
Collana	Metal ions in life sciences, , 1559-0836 ; ; volume 6
Disciplina	572.7
Soggetti	Metalloenzymes Coenzymes Organometallic compounds Vitamin B12
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Organometallic chemistry of B12 coenzymes -- Cobalamin- and corrinoid-dependent enzymes -- Nickel-alkyl bond formation in the active site of methyl-coenzyme M reductase -- Nickel-carbon bonds in acetyl-coenzyme a synthases/carbon monoxide dehydrogenases -- Structure and function of [NiFe]-hydro-genases -- Carbon monoxide and cyanide ligands in the active site of [FeFe]-hydrogenases -- Carbon monoxide as intrinsic ligand to iron in the active site of [Fe]-hydrogenase -- Dual role of heme as cofactor and substrate in the biosynthesis of carbon monoxide -- Copper-carbon bonds in mechanistic and structural probing of proteins as well as in situations where copper is a catalytic or receptor site -- Interaction of cyanide with enzymes containing vanadium, manganese, non-heme iron, and zinc -- Reaction mechanism of the molybdenum hydroxylase xanthine oxidoreductase: evidence against the formation of intermediates having metal-carbon bonds.
Sommario/riassunto	The occurrence of a wide variety of metal-carbon bonds in living organisms, ranging from bacteria to humans, is only recently recognized. Of course, the historical examples are the B12 coenzymes containing cobalt-carbon bonds, but now such bonds are also known for nickel, iron, copper, and other transition metal ions. There is no

other comparable book; MILS-6, written by 17 experts, summarizes the most recent insights into this fascinating topic.
