

1. Record Nr.	UNINA9910797604803321
Autore	Francis Doreen M.
Titolo	The Psychomatrix : A Deeper Understanding of Our Relationship with Pain // Doreen M. Francis
Pubbl/distr/stampa	London : , : Taylor and Francis, , 2018
ISBN	0-429-90772-9 0-429-48295-7 1-78241-492-4
Edizione	[First edition.]
Descrizione fisica	1 online resource (233 p.)
Disciplina	152.1824
Soggetti	Pain - Psychological aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	chapter One Pain—a vital sign of life? / Doreen M. Francis -- chapter Two From Freud's project to Melzack's neuromatrix / Doreen M. Francis -- chapter Three The conceptualisation of the psychomatrix and the subject-pain relationship / Doreen M. Francis -- chapter Four The phantom limb syndrome / Doreen M. Francis -- chapter Five Chronic pain syndrome / Doreen M. Francis -- chapter Six Addiction / Doreen M. Francis.
Sommario/riassunto	"What is pain? What does it mean to have a relationship with it and how does this affect your identity and existence? Doreen Francis' definition of pain is derived from that proposed by scientists, such as Melzack, Wall and Freud. Pain is a dynamic, multi-layered, diverse collection of experiences, which impacts and influences us throughout life. Pain is a kind of conglomerate of past, traumatic, neurobiological, psychological and emotional imprints--pain as in suffering or being in pain. The author's aim here is to argue that it is not pain, as such, but our relationship with pain, which is most significant to the processes of our lives. In examining the combination of Freud's psychosexual theory of development and Melzack's theory of the neuromatrix, Francis endeavours to evidence her theory that there is the distinct possibility for the existence of what she has named a Psychomatrix--patterns of pain (loss, abandonment, grief, rejection, desire) imprinted from infancy, that are specifically translated by their own 'psychological and

emotional neural loops' and therefore, congruent with the neuromatrix concept. She concludes that pain becomes an object that compels us to respond accordingly, thus defining our identity and existence."--
