Cimadamore, Maurice B. Mittelmark and Fungisai P. Gwanzura Ottemoller.
Sommario/riassunto	Argues that human health is the key factor to sustainable development, promoting a transdisciplinary approach to the eradication of extreme poverty. The authors call for new forms of cooperation which cross the

traditional boundaries between social activism and science, and which are capable of harnessing the complex knowledge that such radical change requires. The contributions bridge the gap between those working for health and those working for sustainability science and the green economy, through developing the methodological and scientific means to deal with some of the most critical issues faced by humanity in the twenty-first century. --From publisher description.
