Collana	Queen's Policy Studies Series
Disciplina	330.973
Soggetti	Economic development - United States Economic development - Canada Power resources - Environmental aspects - United States Power resources - Environmental aspects - Canada
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Chapter 1: The Brief History of Economic Growth -- Chapter 2: Energy Matters: Energy Price Shocks and the Global Economic Transformation -- Chapter 3: Global Energy Mega-Risks: Resource Depletion, Geopolitical Security, and Climate Change -- Chapter 4: Why Private Organizations and Markets Fail -- Chapter 5: Can Our Governments Act Pre-emptively? -- Chapter 6: Can Our Governments Forestall Climate Change? -- Chapter 7: Looking Forward.
Sommario/riassunto	Navigating the Titanic outlines the brief history of economic growth and the private and public institutions - markets, corporations, households, and governments - which underpin that growth. Bryne Purchase examines mega-risks related to our economy's use of fossil fuels and specifically looks at resource depletion, energy security, and climate change - all "mega-risks" because they are both global in scope and potentially existential in impact. Focusing on North America, with a particular emphasis on the United States, Purchase's central argument is that the institutions which have produced spectacular economic growth are not capable of acting with prudence to deal with these

mega-risks before they become a real danger. He identifies certain institutional design flaws that, while underwriting economic growth, leave society open to potentially catastrophic failure and reveals how these design flaws have been compounded by the stresses of the growing income inequality in society.
