

1. Record Nr.	UNINA9910798564003321
Autore	Ecklund Elaine
Titolo	Failing Families, Failing Science : Work-Family Conflict in Academic Science // Elaine Ecklund, Anne E. Lincoln
Pubbl/distr/stampa	New York, NY : , : New York University Press, , [2016] ©2016
ISBN	1-4798-5118-3
Descrizione fisica	1 online resource (163 pages)
Disciplina	306.36
Soggetti	Science - Study and teaching (Higher) Science - Vocational guidance Work and family Scientists - Family relationships Scientists
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front matter -- Contents -- Acknowledgments -- 1. When Nothing Matters Except Science -- 2. Family Matters to Science -- 3. Will I Make It? Family Life for Young Scientists -- 4. Managing the Controlled Crash -- 5. When the Ideal Scientist Meets the Ideal Mother -- 6. A Way Forward for Universities, Science, and Scientists -- Appendix A: The Study -- Appendix B: Web Survey -- Appendix C: Long Interview Guide -- Notes -- References -- Index -- About the Authors
Sommario/riassunto	Work life in academia might sound like a dream: summers off, year-long sabbaticals, the opportunity to switch between classroom teaching and research. Yet, when it comes to the sciences, life at the top U.S. research universities is hardly idyllic. Based on surveys of over 2,000 junior and senior scientists, both male and female, as well as in-depth interviews, <i>Failing Families, Failing Science</i> examines how the rigors of a career in academic science makes it especially difficult to balance family and work. Ecklund and Lincoln paint a nuanced picture that illuminates how gender, individual choices, and university and science infrastructures all play a role in shaping science careers, and how science careers, in turn, shape family life. They argue that both men

and women face difficulties, though differently, in managing career and family. While women are hit harder by the pressures of elite academic science, the institution of science—and academic science, in particular—is not accommodating, possibly not even compatible, for either women or men who want to raise families. Perhaps most importantly, their research reveals that early career academic scientists struggle considerably with balancing their work and family lives. This struggle may prevent these young scientists from pursuing positions at top research universities—or further pursuing academic science at all—a circumstance that comes at great cost to our national science infrastructure. In an era when advanced scientific research and education is more important than ever, *Failing Families, Failing Science* presents a compelling inside look at the world of the university scientists who make it possible—and what universities and national science bodies can do to make a difference in their lives.
