Fourteen: Conflicting Identities; Chapter Fifteen: Technology, Infrastructure and the Making of Value in Gold Prospection IndexAbout the Contributors

Sommario/riassunto	This book is an interdisciplinary collection of essays studying the intersections of identities, mobilities, and technologies within the context of knowledge production in Sudan-one of the most conflict-ridden and socially diverse landscapes in the world. The essayists look at the effects of diverse technologies such as social media, mobile telephony, trains, and gold mining on the social and economic identities of one of the world's most highly mobile populations.
