Sommario/riassunto	Patents are important tools for innovation policy. They incentivize the creation and dissemination of new technical solutions and help to

disclose their working to the public in exchange for limited exclusivity. Injunctions are important tools of their enforcement. Much has been written about different aspects of the patent system, but the issue of injunctions is largely neglected in the comparative legal literature. This book explains how the drafting, tailoring and enforcement of injunctions in patent law works in several leading jurisdictions: Europe, the United States, Canada, and Israel. The chapters provide in-depth explanation of how and why national judges provide for or reject flexibility and tailoring of injunctive relief. With its transatlantic and intra-European comparisons, as well as a policy and theoretical synthesis, this is the most comprehensive overview available for practicing attorneys and scholars in patent law. This book is also available as Open Access on Cambridge Core.

Sommario/riassunto

"Based on analysis of 21 arbitral awards rendered in the "Spanish saga"

cases, this book discusses the current challenges faced by international investment law in the renewable energy sector, addressing questions such as which facts led to the unprecedented number of investor-state arbitrations filed against Spain, whether arbitral awards rendered against Spain have an impact on future proceedings commenced against other states, and which legal grounds in international law serve, or may potentially serve, as the basis for investors' claims in the renewable energy sector. Filip Balcerzak offers critical insight into generally applicable lessons for the future-both for adjudicators of renewable energy disputes and for policy-makers"--
