Sommario/riassunto	Les recherches et l'enseignement de Nadine Picaudou (professeur d'histoire des sociétés arabes contemporaines à l'université Paris 1 Panthéon-Sorbonne jusqu'en 2010) offrent un aperçu saisissant des évolutions de l'histoire et du métier des historiens du Proche-Orient contemporain. Les études réunies dans ce volume et écrites à l'

occasion de son départ de l'université par des chercheurs de disciplines variées retracent bien plus que le parcours intellectuel d'une historienne du Proche-Orient. Elles mettent en lumière l'apport croissant des sciences sociales, l'influence continue de terrains particuliers et des conflits de la région (Palestine, Liban), l'évolution des thèmes de recherche et celle des questionnements de la société sur l'histoire contemporaine et parfois très actuelle du Proche-Orient (Islam et modernité, place des femmes, formation et rôle de l'armée, printemps arabes). Avec ces études, c'est l'ensemble du Proche-Orient qui est abordé, de la Turquie à l'Arabie Saoudite et du xix^e siècle à l'année 2014, dans un souci de dialogue constant entre l'histoire et les sciences sociales et humaines - dialogue qui a caractérisé le travail de Nadine Picaudou.

Nota di contenuto	History of Lung Ultrasound -- The Development and Anatomy of Lung -- The Fundamental Principle of Lung Ultrasound -- Lung Ultrasound imaging in Normal Newborns -- Neonatal Respiratory Distress Syndrome -- Transient Tachypnea of the Newborn -- Meconium aspiration syndrome -- Infectious Pneumonia of the Newborn -- Pulmonary Atelectasis of the Newborn -- Neonatal Pneumothorax --

Withdrawn Mechanical Ventilation Under the Monitoring of Lung Ultrasound -- Identify Neonatal Long-Term Oxygen Dependence Using Lung ultrasound.

Sommario/riassunto

This book presents lung ultrasound as an accurate, reliable, low-cost and simple imaging technique, which poses no risk of radiation damage, making bedside use both feasible and convenient in neonatal wards. The aim of this book is to introduce the features of common lung diseases found in newborns that are detected using ultrasonic imaging. It introduces five important diseases, including respiratory distress syndrome (RDS), transient tachypnea of the newborn (TTN), infectious pneumonia of the newborn (IPN), pulmonary atelectasis of the newborn (PAN) and pneumothorax. In addition, the fundamental principles, commonly used terminologies and methods of performing lung ultrasound are also included in this book. The audience includes all neonatologists, pediatricians and pulmonologists.

Chapter 1: Information systems in accounting and finance: an introduction -- Chapter 2: Systems thinking -- Chapter 3: Control ... by design -- Chapter 4: Accounting information systems and the information age -- Chapter 5: Networking... creating connections -- Chapter 6: Information management and data processing -- Chapter 7: Internal control and accounting information systems security -- Chapter 8: Accounting information systems: a cyclical perspective -- Chapter 9: Accounting information systems: transaction processing cycles (i) -- Chapter 10: Accounting information systems: transaction processing cycles (ii) -- Chapter 11: Information technology and the virtual world -- Chapter 12: Risk exposure: fraud, cyber terrorism, and computer crime -- Chapter 13: Accounting information systems audit -- Chapter 14: Accounting information systems development.

Sommario/riassunto

This textbook will offer an introductory insight into the nature, role, and context of accounting information systems. It will explore how companies integrate a range of technologies into their accounting information systems to assist in the management and control of organisational resources and the maximisation of shareholder wealth. This introductory text, aimed primarily at undergraduate students on specialist accounting-related academic programmes including degrees in Accounting and Accounting and Finance, explores the practical and technical aspects of accounting information systems and considers the social, political, and economic pressures that continue to shape the very nature of such accounting information systems with a practical user-orientated perspective. Each chapter will contain learning objectives, examples, references, further reading, and self-review questions. Tony Boczeko is a lecturer in Accounting and Finance at the University of Hull, UK, in the Faculty of Law, Business and Politics. He has undertaken consultancies for a range of UK organisations, presented academic papers at national and international conferences, and authored/co-authored textbooks on accounting, finance, and accounting information systems.
