

1. Record Nr.	UNINA9910799494803321
Autore	Malcher Michelle
Titolo	Pro Oracle Database 23c Administration : Manage and Safeguard Your Organization's Data / / by Michelle Malcher, Darl Kuhn
Pubbl/distr/stampa	Berkeley, CA : , : Apress : , : Imprint : Apress, , 2024
ISBN	9781484298992 1484298993
Edizione	[4th ed. 2024.]
Descrizione fisica	1 online resource (600 pages)
Disciplina	005.7585
Soggetti	Database management Database Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	1. Installing the Oracle Binaries -- 2. Creating a Database -- 3. Configuring an Efficient Environment -- 4. Tablespaces and Data Files -- 5. Managing Control Files, Online Redo Logs and Archivelogs -- 6. Users and Basic Security -- 7. Tables and Constraints -- 8. Indexes -- 9. Views, Duality Views and Materialized Views -- 10. Data Dictionary Fundamentals -- 11. Large Objects -- 12. Containers and Pluggables -- 13. RMAN Backups and Reporting -- 14. RMAN Restore and Recovery -- 15. External Tables -- 16. Automation and Troubleshooting -- 17. Migration to Multitenant and Fleet Management -- 18. Data Management. .
Sommario/riassunto	Master Oracle Database administration in both on-premises and cloud environments. This new edition covers the tasks you'll need to perform to keep your databases stable, tuned, and running. The book also includes administrative tasks specific to cloud environments, including the Oracle Autonomous Database running in the Oracle Cloud Infrastructure. New in this edition is help for DBAs who are becoming involved in data management, and a look at the idea of a converged database and what that means in handling various data types and workloads. The book covers some of the machine learning features now in Oracle and shows how the same SQL that you know for database administration also helps you with data management tasks. The information in this book helps you to apply the right solution at the

right time, mitigating risk and making robust choices that protect your data and avoid midnight phone calls. Data management is increasingly a DBA function, and DBAs are often called upon for help in getting data loaded into analytics environments such as a data lakehouse or a data mesh. This book addresses this fast-growing new role for database administrators and helps you build on your existing knowledge to make the transition into a new skill set that is in high demand. You'll learn how to look at data optimization from the standpoint of data analysis and machine learning so that you can be seen as a key player in preparing your organization's data for those type of activities. You'll know how to pull back information from a combination of relational tables and JSON structures. You'll become familiar with the tools that Oracle Database provides to make analytics easier and more straightforward. And you'll learn simpler ways to manage time-based tables that eliminate the need for painfully creating triggers to track the history of row changes over time. This book builds your skills as an Oracle Database administrator with the aim of helping you to be seen as a key player in data management as your organization pivots toward cloud computing and a greater use of machine learning and analytics technologies.

What You'll Learn

- Configure and manage Oracle 23c databases both on-premises and in the cloud
- Meet your DBA responsibilities in the Oracle Cloud and with Database Cloud Services
- Perform administrative tasks for Autonomous Database dedicated environments
- Perform DBA tasks and effectively use data management tools
- Migrate from on-premises to the Oracle Cloud Infrastructure
- Troubleshoot issues with Oracle 23c databases and quickly solve performance problems
- Architect cloud, on-premises, hybrid, and multi-cloud database environments .
