Sommario/riassunto

This is the first volume to explore clinical and applied sociology in Aotearoa New Zealand, while also providing unique insights into the practice of sociology internationally. Drawing out the intersections between sociological research, public sociology and applied sociology, the chapters in this volume enrich the rapidly growing field of international clinical sociology. Aotearoa New Zealand presents an important case study in the development and practice of sociology: with a vibrant social scientific community and a significant diversity of scholars and practitioners, local research and practice highlight the country's innovative and often unusual approaches to addressing social problems. This volume brings together a diversity of scholars and practitioners, from the country's top sociologists to early career researchers, and provides a comprehensive and valuable exploration of sociology and its many practical applications in this unique context. It covers a wide range of key topics in the field, from the challenges of practicing a public sociology in Aotearoa New Zealand to the role of applied and clinical sociologists in government and consultancies. Contemporary social issues are explored as case studies, including practising sociological psychotherapy; indigenous applications of sociology and Mori language learning; and applying sociology within healthcare. This is a key addition to applied and clinical sociology literature.
