| Sommario/riassunto | How should we think about religion, science, and their relationship in modern society? Some religious groups oppose evolution; some atheists claim science is on their side. Others reconcile their beliefs with science, or consider science and faith to deal with fundamentally different aspects of human life. What indeed is religion: belief or trust in God's existence? How do we distinguish sense from superstition? What does science have to say on such issues? Willem B. Drees considers contemporary discussions of these issues in Europe and North America, using examples from Christianity |
