Litz -- Student Service Members/Veterans' Mental Health on Campuses: Risk and Resources / Dan Nyaronga -- Resilience and Clinical Issues in Survival Behaviour under Isolation and Captivity / Vasile Marineanu.

Sommario/riassunto

"This uniquely interdisciplinary volume deliberates upon the current issues and applications of military psychology not only within the military organization and the discipline of psychology, but also in the larger context of its role of building a better world. Split into three parts dedicated to specific themes, the first part of the book, 'Military

Psychology: The Roots and the Journey' provides an overview of the evolution of the discipline over the years, delving into concepts as varied as culture and cognition in the military, a perspective on the role of military psychology in future warfare and ethical issues. The second part, 'Soldiering: Deployment and Beyond', considers the complexities involved in soldiering in view of the changing nature of warfare, generating a focal discourse on various aspects of military leadership, soldier resilience and post-traumatic growth in the face of extreme situations, bravery and character strengths and transitioning to civilian life. In the final section, 'Making a Choice: Mental Health Issues and Prospects in the Military', the contributors focus on the challenges and practices involved in maintaining the mental health of the soldier, covering issues ranging from stress, mental health and well-being, through to suicide risk and its prevention, intervention and management strategies, moral injury and post-traumatic stress disorder"--
