

1. Record Nr.	UNINA9910807061603321
Titolo	Verifying greenhouse gas emissions [[electronic resource]] : methods to support international climate agreements // Committee on Methods for Estimating Greenhouse Gas Emissions ; Board on Atmospheric Sciences and Climate ; Division on Earth and Life Studies ; National Research Council
Pubbl/distr/stampa	Washington, : National Academies Press, 2010
ISBN	0-309-15757-9 1-282-78744-6 9786612787447 0-309-15212-7
Edizione	[1st ed.]
Descrizione fisica	1 online resource (124 p.)
Disciplina	363.738742
Soggetti	Greenhouse gases - Research Greenhouse effect, Atmospheric Atmospheric carbon dioxide Greenhouse gases - Environmental aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	""Front Matter""; ""Foreword""; ""Preface""; ""Acknowledgments""; ""Contents""; ""Summary""; ""1 Introduction""; ""2 National Inventories of Greenhouse Gas Emissions""; ""3 Measuring Fluxes from Land-Use Sources and Sinks""; ""4 Emissions Estimated from Atmospheric and Oceanic Measurements""; ""References""; ""Appendixes""; ""Appendix A: UNFCCC Inventories of Industrial Processes and Waste""; ""Appendix B: Estimates of Signals Created in the Atmosphere by Emissions""; ""Appendix C: Current Sources of Atmospheric and Oceanic Greenhouse Gas Data"" ""Appendix D: Technologies for Measuring Emissions by Large Local Sources"" ""Appendix E: Biographical Sketches of Committee Members""; ""Appendix F: Acronyms and Abbreviations""
Sommario/riassunto	"The world's nations are moving toward agreements that will bind us together in an effort to limit future greenhouse gas emissions. With

such agreements will come the need for all nations to make accurate estimates of greenhouse gas emissions and to monitor changes over time. In this context, the present book focuses on the greenhouse gases that result from human activities, have long lifetimes in the atmosphere and thus will change global climate for decades to millennia or more, and are currently included in international agreements. The book devotes considerably more space to CO₂ than to the other gases because CO₂ is the largest single contributor to global climate change and is thus the focus of many mitigation efforts. Only data in the public domain were considered because public access and transparency are necessary to build trust in a climate treaty. The book concludes that each country could estimate fossil-fuel CO₂ emissions accurately enough to support monitoring of a climate treaty. However, current methods are not sufficiently accurate to check these self-reported estimates against independent data or to estimate other greenhouse gas emissions. Strategic investments would, within 5 years, improve reporting of emissions by countries and yield a useful capability for independent verification of greenhouse gas emissions reported by countries."--Publisher's web site.
