

1. Record Nr.	UNINA9910807633803321
Autore	Elliott Julian <1955->
Titolo	Dyslexia : developing the debate // Julian Elliott and Roderick I. Nicolson ; edited by Andrew Davis
Pubbl/distr/stampa	London ; ; New York : , : Bloomsbury Academic, , 2016
ISBN	1-4742-3376-7 1-4742-3374-0
Descrizione fisica	1 online resource (218 p.)
Collana	Key debates in educational policy
Disciplina	616.85/53
Soggetti	Dyslexia - Diagnosis Dyslexia - Treatment Dyslexia
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: Series Editor's Preface -- Key Debates in Educational Policy, Christopher Winch -- Notes on Contributors -- Introduction, Andrew Davis -- Part One Developmental Dyslexia: The Bigger Picture, Roderick I. Nicolson -- Part Two Dyslexia: Beyond the Debate, Julian Elliott -- Part Three Response to Julian Elliott, Roderick I. Nicolson -- Part Four Response to Roderick I. Nicolson, Julian Elliott -- Afterword: Some Philosophical Reflections, Andrew Davis -- Bibliography -- Index.
Sommario/riassunto	"Dyslexia is often presented as a clearly delineated condition that can be diagnosed on the basis of appropriate cognitive tests with corresponding forms on intervention. However, this approachable text explores the issues behind this assertion in bringing together leading figures in the field to debate dyslexia. Julian Elliott shows that understandings and usage of the dyslexia label vary substantially with little consensus or agreement and in putting forward his critique draws upon research in several disciplinary fields to demonstrate the irrationality of these arguments. Roderick I. Nicolson demonstrates that current approaches to understanding, identification and support of dyslexia are catastrophically flawed in terms of their failure to consider the developmental nature of dyslexia. He develops two themes: first

that the underlying cause of dyslexia is 'delayed neural commitment' for skills and neural circuits, and second that the cause of the reading disability is the introduction of formal instruction before the dyslexic child's neural circuits for executive function are sufficiently developed. He argues that a more effective and cost-effective approach to identification and support involves 'assessment for dyslexia' rather than 'of dyslexia'. Elliott and Nicolson respond to the points each other raise before Andrew Davis investigates how far the key claims of Elliott and Nicolson can withstand close conceptual investigation, and explores the inherent limitations of scientific research on this topic, given the value and conceptual issues concerned."--
