

1. Record Nr.	UNINA9910807645903321
Titolo	Biomedical textiles for orthopaedic and surgical applications : fundamentals, applications and tissue engineering // edited by Todd Blair
Pubbl/distr/stampa	Amsterdam, Netherlands : , : Woodhead Publishing, , 2015 ©2015
ISBN	1-78242-026-6
Descrizione fisica	1 online resource (212 p.)
Collana	Woodhead Publishing Series in Biomaterials ; ; Number 93
Disciplina	610.28
Soggetti	Biomedical materials - Therapeutic use Biomedical engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Front Cover; Biomedical Textiles for Orthopaedic and Surgical Applications: Fundamentals, Applications and Tissue Engineering; Copyright; Contents; List of contributors; Woodhead Publishing Series in Biomaterials; Chapter 1: Biomechanical testing and the development of silk-based textiles for regenerative medicine and surgery; 1.1. Introduction; 1.2. Current landscape; 1.3. A new paradigm: Compliance Matching and Material Property Led Engineering Technologies; 1.3.1. Phase 1: Understanding natural tissue; 1.3.2. Phase 2: Comparison with current solutions 1.3.3. Phase 3: Novel compliance-matched solutions1.3.4. Importance of sample quantity and quality; 1.3.5. Mechanical testing; 1.3.6. Thermal testing; 1.3.7. Optical testing; 1.4. CoMMPLETe case study: Rotator cuff tendons; 1.4.1. CoMMPLETe phase 1: Understanding rotator cuff properties; 1.4.2. CoMMPLETe phase 2: Comparison with existing patches; 1.5. Future trends and applications; 1.5.1. CoMMPLETe phase 3: Developing silk-based solutions; 1.6. Conclusions; 1.7. Sources of further information and advice; Websites; Acknowledgements; References Chapter 2: Embroidery technology for hard-tissue scaffolds2.1. Introduction; 2.1.1. Incidence and medical relevance of critical size

defects; 2.1.2. Applied therapies and their limitations; 2.1.3. Regeneration of critical size defects by tissue engineering; 2.1.4. Scaffolds for bone tissue engineering; 2.2. Manufacturing of porous textile structures using embroidery technology; 2.2.1. Principal aspects of embroidery technology; 2.2.2. Thread materials for scaffold fabrication using embroidery technology; 2.2.2.1. Surgical thread materials; 2.2.2.2. Noncommercial fibres  
2.2.3. Embroidered scaffolds  
2.3. Application of embroidered scaffolds for hard-tissue engineering; 2.3.1. Tissue engineering strategies for hard-tissue implants based on embroidered scaffolds; 2.3.2. Coatings for improved osteoconductivity and osteoinductivity; 2.3.3. Cell selection and seeding procedures; 2.3.4. Tissue engineering of hard tissue; 2.4. Conclusion; 2.5. Future trends; References; Chapter 3: Nonwoven scaffolds for bone regeneration; 3.1. The structure of bone and the mechanisms for self-repair; 3.2. Fibre manufacture from biomaterials; 3.2.1. Collagen  
3.2.2. Poly(-caprolactone)  
3.3. Design and assembly of scaffold architectures; 3.4. Considerations for surgical implantation of nonwoven scaffolds; 3.5. Future trends; Acknowledgements; References; Chapter 4: Bioabsorbable fabrics for musculoskeletal scaffolds; 4.1. Introduction; 4.2. Bioabsorbable materials, fibre spinning and properties, and yarn preparation; 4.3. Processing technologies for fabrics; 4.3.1. Weaving; 4.3.2. Knitting; 4.3.3. Braiding; 4.3.4. Other methods; 4.4. Fabric structures and their characteristics; 4.4.1. Characteristics of woven structures  
4.4.2. Characteristics of knitted structures
