Sommario/riassunto

This book, authored by Dr. H. R. Kollai, explores the integration of displaced persons and migrants in Lower Saxony, Germany, post World War II. It examines the socio-economic impacts and challenges faced by these groups during their resettlement process. The book discusses the initial distribution of these populations, their housing situations, and their gradual social and professional integration into the local community. It also addresses the changes in the industrial landscape due to the establishment of refugee enterprises and the resulting shifts in the labor market. Aimed at scholars and policymakers, the book provides detailed statistical analyses and insights into the regional and occupational mobility of refugees, as well as the social tensions and integration efforts between native and new residents.

## Sommario/riassunto

... it gives me great pleasure to support the first ever publication to specifically address the area of research, and in particular its relationship with practice, in the discipline of architectural technology... not only ground breaking because it is the first book of its kind, but also because it provides at long last one of the accepted foundations needed to underpin the emerging academic discipline, namely a recognised research base. CIAT, in supporting this publication, is aware of the need for books such as this to sustain the process of research informed practice, as an ai
