

1. Record Nr.	UNINA9910807756103321
Autore	Zienkiewicz Olek C
Titolo	The finite element method for fluid dynamics // O.C. Zienkiewicz, R.L. Taylor, P. Nithiarasu
Pubbl/distr/stampa	Oxford : , : Butterworth-Heinemann, , 2014
ISBN	0-08-095137-6
Edizione	[Seventh edition.]
Descrizione fisica	1 online resource (xxxvi, 544 pages) : illustrations (some color)
Collana	Gale eBooks
Disciplina	620.10601515353
Soggetti	Finite element method Fluid dynamics Fluid dynamics - Mathematical models
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Introduction to the equations of fluid dynamics and the finite element approximation -- Convection-dominated problems : finite element approximations to the convection-diffusion-reaction equation -- The characteristic-based split (CBS) algorithm : a general procedure for compressible and incompressible flow -- Incompressible Newtonian laminar flows -- Incompressible non-Newtonian flows -- Free surface and buoyancy driven flows -- Compressible high-speed gas flow -- Turbulent flows -- Generalized flow and heat transfer in porous media -- Shallow-water problems -- Long and medium waves -- Short waves -- Fluid-structure interaction -- Biofluid dynamics -- Computer implementation of the CBS algorithm.
Sommario/riassunto	This book offers a complete introduction to the application of the finite element method to fluid mechanics. It begins with a useful summary of all relevant partial differential equations before moving on to discuss convection stabilization procedures, steady and transient state equations, and numerical solution of fluid dynamic equations.
