Sommario/riassunto	Some of the most visible expressions of human culture are illustrated

architecturally. Unfortunately for archaeologists, the architecture being studied is not always visible and must be inferred from soil inconsistencies or charred remains. This study deals with research into roughly a millennium of Native American architecture in the Southeast and includes research on the variation of construction techniques employed both above and below ground. Most of the architecture discussed is that of domestic houses with some emphasis on large public buildings and sweat lodges. The authors use an
