Supporting the caregiver in heart failure""; ""Index""

Sommario/riassunto

Heart failure is a condition that often results in chronic tiredness and shortness of breath. It also requires complex nursing and medical treatment, especially after a hospital admission, which is all too frequent for persons with heart failure. This book describes and discusses the latest research concerning the benefits of having specially trained nurses manage the care of patients with heart failure after they have been discharged from hospital to their own home. Leading nurses and doctors from around the world discuss their experiences with this type of innovative and effective care progra
