Livello bibliografico	Monografia
Note generali	"March 2006."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	""Contents""; ""I. INTRODUCTION""; ""II. HISTORY AND CHARACTERISTICS""; ""III. THE MODEL ""; ""IV. CONCLUDING REMARKS""; ""References""
Sommario/riassunto	Following a brief review of the recent history of GDP-linked instruments, this paper proposes a set of tools to examine the quantitative properties of GDP-linked warrants. It argues that trigger conditions should be clearly identifiable and payment amounts easily calculable. Based on a design that includes these features and historical data for the main EMBI countries, the paper provides an assessment of the issuer's capacity to service GDP-linked warrants, comparing payments with tax revenues stemming from contemporaneous growth. The price of the GDP-linked warrants are then estimated from the point of view of both domestic and foreign investors.
