

1. Record Nr.	UNINA9910809383403321
Autore	Wolf Joan B (Joan Beth)
Titolo	Is breast best? : taking on the breastfeeding experts and the new high stakes of motherhood // Joan B. Wolf
Pubbl/distr/stampa	New York, : New York University Press, c2011
ISBN	0-8147-9525-0
Edizione	[1st ed.]
Descrizione fisica	1 online resource (260 p.)
Collana	Biopolitics : medicine, technoscience, and health in the 21st century
Disciplina	649/.33
Soggetti	Breastfeeding Breastfeeding - Government policy - United States Breastfeeding - Social aspects
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface : why breastfeeding? -- Monitoring mothers : a recent history of following the doctor's orders -- The science : does breastfeeding make smarter, happier, and healthier babies? -- Minding your own (risky) business : health and personal responsibility -- From the womb to the breast : total motherhood and risk-free children -- Scaring mothers : the government campaign for breastfeeding -- Conclusion : whither breastfeeding?.
Sommario/riassunto	Since the invention of dextri-maltose and the subsequent rise of Similac in the early twentieth century, parents with access to clean drinking water have had a safe alternative to breast-milk. Use of formula spiked between the 1950's and 1970's, with some reports showing that nearly 75 percent of the population relied on commercial formula to at least supplement a breastfeeding routine. So how is it that most of those bottle-fed babies grew up to believe that breast, and only breast, is best? In <i>Is Breast Best?</i> Joan B. Wolf challenges the widespread belief that breastfeeding is medically superior to bottle-feeding. Despite the fact that breastfeeding has become the ultimate expression of maternal dedication, Wolf writes, the conviction that breastfeeding provides babies unique health benefits and that formula feeding is a risky substitute is unsubstantiated by the evidence. In accessible prose, Wolf argues that a public obsession with health and what she calls "total motherhood" has made breastfeeding a cause

célèbre, and that public discussions of breastfeeding say more about infatuation with personal responsibility and perfect mothering in America than they do about the concrete benefits of the breast. Why has breastfeeding re-asserted itself over the last twenty years, and why are the government, the scientific and medical communities, and so many mothers so invested in the idea? Parsing the rhetoric of expert advice, including the recent National Breastfeeding Awareness Campaign, and rigorously questioning the scientific evidence, Wolf uncovers a path by which a mother can feel informed and confident about how best to feed her thriving infant—whether flourishing by breast or by bottle.
