Ashley Roach and Zhen Sun.
Sommario/riassunto	High Seas Governance: Gaps and Challenges identifies gaps and challenges to the existing legal regime in the protection and

preservation of the marine environment of the high seas, including sensitive marine areas. The gaps identified in the book include the failure of liability and compensation schemes to cover pollution of the high seas and the fact that no state has the responsibility to clean up pollution of the high seas. One common theme of the book is that it is necessary to identify a state other than flag states, port states or coastal states, which should have an obligation to exercise jurisdiction and control over certain activities on the high seas.
