

1. Record Nr.	UNINA9910809816403321
Autore	Voegeli Richard
Titolo	Patterns for the edge of network / / [Richard Voegeli, Byron Braswell]
Pubbl/distr/stampa	Triangle Park, NC, : IBM Redbooks, 2002
Edizione	[1st ed.]
Descrizione fisica	1 online resource (422 p.)
Collana	Redbooks
Altri autori (Persone)	BraswellByron
Disciplina	658.8/72/0285
Soggetti	Electronic commerce
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"SG24-6822-00."
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front cover -- Contents -- Notices -- Trademarks -- Preface -- The team that wrote this redbook -- Become a published author -- Comments welcome -- Part 1 Introduction to Patterns -- Chapter 1. Patterns for e-business -- 1.1 The Patterns for e-business layered asset model -- 1.2 How to use the Patterns for e-business -- 1.2.1 Select a Business, Integration, or Composite pattern, or a Custom design -- 1.2.2 Selecting Application patterns -- 1.2.3 Review Runtime patterns -- 1.2.4 Review Product mappings -- 1.2.5 Review guidelines and related links -- 1.3 Summary -- Chapter 2. Edge of network Runtime patterns for high availability -- 2.1 High availability principles -- 2.1.1 High availability rules for Runtime environments -- 2.1.2 Redundancy -- 2.1.3 Request distribution -- 2.2 Runtime node types and tiers -- 2.2.1 Runtime nodes -- 2.2.2 Network tiers -- 2.3 Runtime patterns for high availability -- 2.3.1 Application patterns -- 2.3.2 Basic Runtime pattern -- 2.3.3 Basic Runtime pattern variation 1: Single load balancer -- 2.3.4 Basic Runtime pattern variation 2: Load balancer hot standby -- 2.3.5 Basic Runtime pattern variation 3: Mutual high availability -- 2.3.6 Basic Runtime pattern variation 4: wide area load balancing -- Chapter 3. Edge of network Runtime patterns for performance -- 3.1 Performance factors -- 3.2 Enhancing performance with proxy servers -- 3.3 Runtime nodes -- 3.4 Runtime patterns -- 3.4.1 Basic Runtime pattern variation 5: Redirectors -- 3.4.2 Basic Runtime pattern variation 6: separation -- 3.4.3 Basic Runtime pattern variation 7: caching proxy -- 3.5 Where to cache -- Part 2 Runtime patterns: guidelines -- Chapter 4. Technology guidelines -- 4.1

WebSphere Edge Server -- 4.1.1 Components -- 4.1.2 History -- 4.2 Load Balancer -- 4.2.1 Load Balancer forwarding methods -- 4.2.2 Media Access Control (MAC) forwarding.

4.2.3 Network Address Translation (NAT) forwarding -- 4.2.4 Network Address Port Translation (NAPT) forwarding -- 4.2.5 Load Balancer High Availability feature -- 4.2.6 Load Balancer Mutual High Availability feature -- 4.2.7 Wide Area Network Dispatcher (WAND) -- 4.2.8 Advisors -- 4.2.9 Metric Server -- 4.3 Caching Proxy -- 4.3.1 Forward proxy -- 4.3.2 Reverse proxy -- 4.3.3 Cache -- 4.4 Considerations for a high availability configuration -- 4.4.1 High availability configuration of nodes -- 4.4.2 Server affinity -- 4.4.3 Failover -- 4.5 WebSphere plug-in -- Chapter 5. Security guidelines -- 5.1 The need for security -- 5.2 Concepts of cryptography and digital certificates -- 5.2.1 Symmetric encryption algorithms -- 5.2.2 Asymmetric encryption algorithms -- 5.2.3 Performance issues of cryptosystems -- 5.2.4 Cryptosystems for data integrity -- 5.2.5 Digital signatures -- 5.2.6 Public Key Infrastructure -- 5.3 Firewall concepts -- 5.3.1 General guidelines for implementing firewalls -- 5.3.2 Firewall categories -- 5.3.3 Hardening -- 5.4 Virtual private network (VPN) and IPSec -- 5.4.1 IPSec -- 5.4.2 Alternative VPN solutions: Layer 2 Tunnelling Protocol -- 5.5 Secure Sockets Layer (SSL) -- 5.5.1 Establishing secure communications with SSL -- 5.5.2 SSL considerations -- 5.5.3 Where to use SSL -- 5.6 Authentication and authorization -- 5.6.1 User authentication -- 5.6.2 User authorization -- 5.7 Authenticating proxy -- 5.7.1 Runtime pattern variation 8: Authenticating proxy -- Part 3 Runtime implementation -- Chapter 6. Common installation and configuration guidelines -- 6.1 Common installation guidelines -- 6.1.1 General guidelines -- 6.1.2 Load Balancer -- 6.1.3 Caching Proxy -- 6.1.4 Proxy CBR -- 6.1.5 DB2 Client -- 6.1.6 Application Server -- 6.2 Common configuration guidelines -- 6.2.1 Aliasing a loopback adapter.

Chapter 7. Test environment example -- 7.1 Scenario description -- 7.1.1 Overview -- 7.1.2 Traffic flow -- 7.2 Configuration description -- 7.2.1 Databases -- 7.2.2 WebSphere Application Server -- 7.2.3 Load balancer node -- 7.2.4 Testing the environment -- Chapter 8. Sample ASP environment -- 8.1 Scenario description -- 8.1.1 Traffic flow -- 8.1.2 Scalability -- 8.1.3 Naming -- 8.1.4 Node functionalities -- 8.2 Basic configuration description -- 8.2.1 Name resolution -- 8.2.2 DB Server -- 8.2.3 DB Client -- 8.2.4 Application servers -- 8.2.5 HTTP server -- 8.2.6 Caching proxies -- 8.2.7 Load balancers -- 8.3 Configure WebSphere Application Server for local dynacache -- 8.3.1 Web Application Servers -- 8.4 Testing local dynacache -- 8.5 Configure external dynacache -- 8.5.1 Caching proxy servers -- 8.5.2 Web Application Servers -- 8.6 Testing external dynacache -- 8.6.1 Dynamic query responses issue -- Chapter 9. Company environment -- 9.1 Scenario description -- 9.1.1 Traffic flow -- 9.1.2 Scalability -- 9.1.3 Naming -- 9.1.4 Node functionalities -- 9.2 Configuration description -- 9.2.1 Name resolution -- 9.2.2 Database server -- 9.2.3 DB clients -- 9.2.4 Application servers -- 9.2.5 HTTP servers -- 9.2.6 Caching Proxies -- 9.2.7 Load balancers -- 9.3 Testing the environment -- Appendix A. Configuration files -- ASP environment configuration files -- Glossary -- Abbreviations and acronyms -- Related publications -- IBM Redbooks -- Other resources -- Referenced Web sites -- How to get IBM Redbooks -- IBM Redbooks collections -- Index -- Back cover.
