

1. Record Nr.	UNINA9910809963703321
Titolo	Using Web services for business integration // Geert Van de Putte ... [et al.]
Pubbl/distr/stampa	Research Triangle Park, NC, : IBM, International Technical Support Organization, c2004
Edizione	[1st ed.]
Descrizione fisica	xvi, 422 p. : ill
Collana	WebSphere software IBM redbooks
Altri autori (Persone)	PutteGeert van de JanaJoydeep KeenMartin KondepudiSandhya MascarenhasRoberto OgiralaSatish RudrofDaniela SullivanKen SwithinbankPeter
Soggetti	Electronic commerce - Computer programs Web services Enterprise application integration (Computer systems)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	April 2004." "SG24-6583-00."
Nota di bibliografia	Includes bibliographical references (p. 413-414) and index.
Nota di contenuto	Front cover -- Contents -- Notices -- Trademarks -- Preface -- The team that wrote this redbook -- Become a published author -- Comments welcome -- Chapter 1. Web services technology and standards -- 1.1 Web services architecture -- 1.2 Transport layer -- 1.2.1 HTTP -- 1.2.2 JMS -- 1.2.3 SMTP -- 1.2.4 Emerging standards for transport -- 1.3 Service communication protocol layer -- 1.3.1 SOAP -- 1.4 Service description layer -- 1.4.1 XML -- 1.4.2 ebXML -- 1.4.3 WSDL -- 1.5 Service layer -- 1.5.1 Web services and J2EE -- 1.5.2 A new set of Java Specification Requests -- 1.5.3 The Apache Web

Services Invoation Framework -- 1.6 Business process layer -- 1.6.1 Process Choreographer -- 1.6.2 WSFL and XLANG -- 1.6.3 Emerging standards for business process -- 1.7 Service registry layer -- 1.7.1 Static and dynamic Web services -- 1.7.2 UDDI -- 1.8 Policy layer -- 1.8.1 Security layer -- 1.8.2 Security at the transport layer -- 1.8.3 Security at the service communication protocol layer -- 1.8.4 Security at the service description layer -- 1.8.5 Emerging standards for security -- 1.8.6 Web services security references for further information -- 1.9 Transaction layer -- 1.9.1 WS-Coordination -- 1.9.2 WS-Transaction -- 1.9.3 Conversation support for Web services -- 1.10 Management layer -- Chapter 2. Sample application -- 2.1 Business motivation -- 2.2 Use cases -- 2.3 Applying the Patterns for e-business -- 2.4 Overall process/application description -- 2.4.1 Add a new contact -- 2.4.2 Use a service -- 2.4.3 Quota re-authorization -- 2.4.4 Remove contact -- 2.4.5 Summary -- 2.5 AccessTracker interfaces and tables -- 2.6 Building and deploying the DB2 database -- 2.6.1 Installing DB2 Enterprise Server Edition 8.1 -- 2.6.2 Create database and application table -- 2.7 Implementing the application -- 2.8 Deploying the application. 2.8.1 Building a development environment -- 2.8.2 Importing the application in Studio -- 2.8.3 Configuring a Test Server in Studio -- 2.8.4 Testing the EJB -- 2.9 Development of the Web service -- 2.10 Summary -- Chapter 3. WebSphere InterChange Server as a Web services router -- 3.1 The WebSphere InterChange Server and its main components -- 3.1.1 The InterChange Server -- 3.1.2 Collaborations -- 3.1.3 Business objects -- 3.1.4 Adapters -- 3.2 Why Web services for a process broker -- 3.2.1 Introducing the Web services adapter -- 3.3 Building a runtime and development environment -- 3.3.1 Installing WebSphere InterChange Server -- 3.3.2 Starting and using the InterChange Server -- 3.3.3 Using WebSphere Studio -- 3.3.4 Installing WebSphere BI Adapters V2.3.1 -- 3.3.5 Installing and configuring the Web-based System Monitor -- 3.4 Overview of implemented scenarios -- 3.5 Building the integration solution -- 3.5.1 Implementation steps -- 3.5.2 Preparing Studio -- 3.5.3 Develop business object ACC\_CUSTOMERACCESS -- 3.5.4 Definition of maps -- 3.5.5 Configuring the JDBC connector -- 3.5.6 Configuring the Port connector -- 3.5.7 The collaboration template CustomerSync -- 3.5.8 The collaboration object ACC\_CustomerSync -- 3.5.9 Deployment of the project -- 3.5.10 Testing the integration solution -- 3.6 Scenario 1: Invoking a collaboration as a Web service -- 3.6.1 Implementation steps -- 3.6.2 Create the top-level business object -- 3.6.3 Develop maps between ASBO and GBO -- 3.6.4 Updating the Port connector -- 3.6.5 Intermediate deployment and testing -- 3.6.6 Configure the Web services connector -- 3.6.7 Configure and create external resources for the connector -- 3.6.8 Deployment and testing -- 3.6.9 Generation of WSDL for the collaboration -- 3.6.10 Development of Web services clients -- 3.7 Scenario 2: Invoking a Web service from a collaboration. 3.7.1 Implementation steps -- 3.7.2 Using the Web services ODA -- 3.7.3 Create top-level business object -- 3.7.4 Transformation maps -- 3.7.5 Create a second instance of the Web Services adapter -- 3.7.6 Update the collaboration -- 3.7.7 Deploy and test -- 3.8 Summary -- Chapter 4. WebSphere BI Message Broker as a Web services router -- 4.1 Introducing the WebSphere BI Message Broker product -- 4.1.1 WebSphere Business Integration reference architecture -- 4.1.2 Components of WebSphere BI Message Broker -- 4.1.3 HTTP transport nodes -- 4.2 Why Web services for a message broker -- 4.3 Building a development and runtime environment -- 4.3.1 Installation of the Message Broker product -- 4.3.2 Creating the broker and configuration

manager -- 4.3.3 Connecting the Toolkit to the broker domain -- 4.4 Overview of implemented scenarios -- 4.5 Scenario 1: Routing a Web service through a message flow -- 4.5.1 Implementation steps -- 4.5.2 Define the message flow -- 4.5.3 Create the broker test environment -- 4.5.4 Run the Web client -- 4.6 Scenario 2: Invoke a Web service in a message flow -- 4.6.1 Implementation steps -- 4.6.2 MQ message triggers a Web service invocation -- 4.6.3 Populating Web service invocation with MQ message elements -- 4.6.4 Populating an MQ message with the results of a Web service -- 4.7 Scenario 3: Publishing a message flow as a Web service -- 4.7.1 Implementation steps -- 4.7.2 Generate WSDL for a message definition -- 4.7.3 Update message flow -- 4.7.4 Create a bar file and deploy to broker -- 4.7.5 Build a Web service client and run it -- 4.8 Summary -- Chapter 5. WebSphere Enterprise as a Web services router -- 5.1 Introducing WebSphere Enterprise -- 5.2 Business process engine -- 5.3 Using WebSphere Enterprise for Business Integration -- 5.3.1 Request processing -- 5.3.2 Event notification. 5.3.3 Business integration based on Web services -- 5.4 Building a runtime and development environment -- 5.4.1 Installing and configuring WebSphere Application Server -- 5.5 Overview of implemented scenarios -- 5.6 Scenario 1: Router-initiated integration -- 5.6.1 Implementation steps -- 5.6.2 Connector configuration -- 5.6.3 Create and deploy a user project -- 5.6.4 Generate deploy code -- 5.6.5 Create a test server in Studio -- 5.6.6 Test end-to-end solution -- 5.7 Scenario 2: Application-initiated integration -- 5.7.1 Implementation steps -- 5.7.2 Database configuration -- 5.7.3 Create service project -- 5.7.4 Create the Enterprise JavaBean -- 5.7.5 Create the message-driven bean -- 5.7.6 Updating the test server configuration -- 5.7.7 Deployment to WebSphere Application Server and testing -- 5.8 The Adapter Monitor perspective -- 5.9 WebSphere Application Server deployment and runtime operations -- 5.10 Summary -- Chapter 6. Process Choreographer as a Web services router -- 6.1 Introducing Process Choreographer -- 6.2 Overview of implemented scenarios -- 6.3 Creating a development and runtime environment -- 6.3.1 Business process container setup -- 6.3.2 Business process container validation -- 6.4 Scenario 1: Invoking a collaboration -- 6.4.1 Overview and implementation steps -- 6.4.2 Importing and tailoring the WSDL -- 6.4.3 Creating the SOAP process -- 6.4.4 Creating the JMS process -- 6.4.5 Testing in the Unit Test Environment -- 6.4.6 Testing in WebSphere Application Server Enterprise -- 6.5 Scenario 2: Invoking a WebSphere Business Integration Adapter -- 6.6 Scenario 3: Invoking a message flow -- 6.7 Summary -- Appendix A. Hardware and software configuration -- Machine configuration -- Installation order -- Appendix B. Additional material -- Locating the Web material -- Using the Web material. System requirements for downloading the Web material -- How to use the Web material -- Abbreviations and acronyms -- Related publications -- IBM Redbooks -- Online resources -- How to get IBM Redbooks -- Help from IBM -- Index -- Back cover.
