Autore	Schmidt Helmut
Titolo	Meta-Level Control for Deductive Database Systems [[electronic resource] /] / by Helmut Schmidt
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 1991
ISBN	3-540-47082-4
Edizione	[1st ed. 1991.]
Descrizione fisica	1 online resource (VI, 156 p.)
Collana	Lecture Notes in Computer Science, , 0302-9743 ; ; 479
Disciplina	005.74
Soggetti	Data structures (Computer science) Database management Artificial intelligence Data Structures and Information Theory Database Management Artificial Intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	A standard deductive database system -- An expert deductive database system -- Discarding irrelevant tuples -- Disregarding irrelevant rules -- Explicit termination of recursion -- Preferring useful rules -- Preferring useful tuples -- Summary and outlook.
Sommario/riassunto	The development of database technology has currently reached the stage of deductive database systems which use Horn clauses for defining relations. An important characteristic of these systems is the clear separation of logic and control. However, the programmer cannot affect the control part of a deductive database system. To eliminate this deficiency, this monograph presents a so-called expert deductive database system that allows explicit control of the deduction process. The system consists of an object-level describing the logical aspects of a problem and of a meta-level that contains application-specific control information affecting the object-level deduction process. For example, object-level rules can be disregarded, and some tuples deduced at the object-level can be preferred to others. Besides the architecture of this system, the book also identifies some important

possibilities of deduction control which are explained by characteristic examples.

Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Facial Resurfacing; Contents; List of Contributors; Preface; Chapter 1 Peels; Chapter 2 Non-Ablative Resurfacing; Chapter 3 Fractional Ablative Resurfacing; Chapter 4 Non-Surgical Facial Skin Tightening; Chapter 5 Photodynamic Photorejuvenation; Chapter 6 Fillers and Botulinum Toxins; Chapter 7 Cosmeceuticals; Index
Sommario/riassunto	Facial resurfacing rejuvenates the skin to reduce the effects of aging, and today's cosmetic physician ideally uses a variety of methods to resurface and rejuvenate the skin without surgery. This book examines the full range of available modalities to help the cosmetic dermatologist recommend the best approach for each patient. Topics

include clinical indications, advantages, and disadvantages.
