

1. Record Nr.	UNINA9910810387803321
Titolo	Parallel finite-difference time-domain method // Wenhua Yu ... [et al.]
Pubbl/distr/stampa	Boston, MA, : Artech House, c2006
ISBN	1-59693-086-1
Edizione	[1st ed.]
Descrizione fisica	1 online resource (272 p.)
Collana	Artech House electromagnetic analysis series
Altri autori (Persone)	YuWenhua
Disciplina	537
Soggetti	Electromagnetism - Data processing Finite differences - Data processing Parallel programming (Computer science) Time-domain analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Parallel Finite-Difference Time-Domain Method; Contents; Preface; FDTD Method; Chapter 2 Boundary Conditions; Chapter 3 Improvement of the FDTD; Chapter 4 Excitation Source; Chapter 5 Data Collection and Post-Processing; Chapter 6 Introduction to Parallel Computing Systems; Chapter 7 Parallel FDTD Method; Chapter 8 Illustrative Engineering Applications; Chapter 9 FDTD Analysis of Bodies of Revolution; Chapter 10 Parallel BOR/FDTD; Appendix A Introduction to Basic MPI Functions; Appendix B PC Cluster-Building Techniques; List of Notations; About the Authors; Index.
Sommario/riassunto	The finite-difference time-domain (FDTD) method has revolutionized antenna design and electromagnetics engineering. This book raises the FDTD method to the next level by empowering it with the vast capabilities of parallel computing. It shows engineers how to exploit the natural parallel properties of FDTD to improve the existing FDTD method and to efficiently solve more complex and large problem sets. Professionals learn how to apply open source software to develop parallel software and hardware to run FDTD in parallel for their projects. The book features hands-on examples that illustrate th.
