Sommario/riassunto

Current and comprehensive information concerning the assessment and treatment of suicidal persons and the prevention of suicidal behavior The eighth leading cause of death in the United States and the second leading cause among U.S. teens, suicide is unique in being self-inflicted and is, as such, often preventable. By assessing the risk of suicide accurately, providing effective treatment according to this risk, and implementing strategies against suicidal urges, mental health professionals can successfully guide their clients away from this senseless taking of life. Assessment, Treatm
