

1. Record Nr.	UNINA9910810688103321
Autore	Weijer Jeroen Maarten van de <1965->
Titolo	Segmental structure and complex segments // Jeroen van de Weijer
Pubbl/distr/stampa	Tubingen : , : M. Niemeyer, , 1996
ISBN	3-11-095529-6
Edizione	[Reprint 2015]
Descrizione fisica	1 online resource (244 pages)
Collana	Linguistische Arbeiten, , 0344-6727 ; ; 350
Disciplina	414
Soggetti	Grammar, Comparative and general - Phonology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Frontmatter -- Contents -- Introduction -- Chapter 1 Vowel place elements -- Chapter 2 Consonant place elements -- Chapter 3 Complex segments and phonological complexity -- Chapter 4 Head-dependent asymmetries at the segmental level -- Chapter 5 Manner primitives -- Chapter 6 Colour mixing in consonants -- Chapter 7 Affricates -- Chapter 8 Prenasalised stops -- Chapter 9 /s/ plus stop clusters -- Chapter 10 Two-root complex segments -- References
Sommario/riassunto	This volume offers a theory of phonological structure which pays particular attention to the representation of 'complex segments', such as affricates. The first two chapters are concerned with the primitives needed to express place of articulation in phonological segments. In chapters 3 and 4 the relevance of complex segments to phonological theory is discussed from a general perspective. Chapter 3 also provides a general formalisation of complexity in segmental phonology, namely as branching in the segmental structure. Chapter 5 is concerned with the structure of the other phonological dimension that is investigated, namely manner. The second part of the volume deals with specific studies of segmental complexity on the place and the manner dimension, respectively: chapter 6 is concerned with place complexity, and chapters 7-9 with manner complexity. Chapter 7 deals with affricates, chapter 8 with prenasalised stops and chapter 9 with /s/ plus stop clusters. Chapter 10, finally, discusses a category of segments which combine two root nodes under a single timing position, such as consonants with secondary articulation and short diphthongs.
