

1. Record Nr.	UNINA9910810800403321
Titolo	Micro- and nanosystems for biotechnology // edited by J. Christopher Love
Pubbl/distr/stampa	Weinheim, Germany : , : Wiley-VCH Verlag GmbH & Company KGaA, , [2016] ©2016
ISBN	3-527-80132-4 3-527-80129-4
Descrizione fisica	1 online resource (305 p.)
Collana	Advanced biotechnology ; ; volume 2
Soggetti	Biotechnology Nanotechnology Microtechnology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Title Page; Copyright; Contents; List of Contributors; About the Series Editors; Preface; Part I Microsystems for Single-Cell Analysis; Chapter 1 Types of Clinical Samples and Cellular Enrichment Strategies; 1.1 Introduction; 1.2 Types of Clinical Samples; 1.2.1 Solid Clinical Samples; 1.2.1.1 Cellular Subtypes Found in Solid Clinical Samples; 1.2.2 Liquid Clinical Samples and Cellular Subtypes; 1.2.2.1 Blood; 1.2.2.2 Bone Marrow; 1.2.2.3 Placental or Umbilical Cord Blood; 1.2.2.4 Urine; 1.2.2.5 Cerebrospinal Fluid (CSF); 1.2.2.6 Saliva 1.3 Sample Processing and Conventional Methods of Cell Enrichment 1.3.1 Processing Solid Clinical Samples; 1.3.1.1 Processing Liquid Samples; 1.3.2 Cell Enrichment; 1.3.2.1 Laser Capture Microdissection (LCM); 1.3.2.2 Density Gradient Centrifugation; 1.3.2.3 Fluorescence-Activated Cell Sorting (FACS); 1.3.2.4 Magnetic Activated Cell Sorting (MACS); 1.3.2.5 CellSearch™; 1.4 Microscale/Nanoscale Devices for Cellular Enrichment; 1.4.1 Filtration Approaches; 1.4.2 Hydrodynamic Mechanisms; 1.4.3 Surface Treatments; 1.4.4 Magnetophoresis; 1.4.5 Electrophoresis; 1.4.6 Acoustophoresis 1.4.7 Optical Tweezers/Traps 1.5 Conclusion; References; Chapter 2 Genome-Wide Analysis of Single Cells and the Role of Microfluidics; 2.1

Motivation for Single-Cell Analysis of Genomes and Transcriptomes; 2.2 Single-Cell Genomics; 2.2.1 Major Technical Challenges; 2.2.2 Approaches to Single-Cell Genomics; 2.2.3 The Application and Impact of Microfluidics in Single-Cell Genomics; 2.3 Single-Cell Transcriptomics; 2.3.1 Major Technical Challenges; 2.3.2 Approaches to Single-Cell Transcriptomics; 2.3.3 Application and Impact of Microfluidics in Single-Cell Transcriptomics 2.4 The Future of Genome-Wide Single-Cell Analysis with Microfluidics 2.4.1 Recent Advances in the Scalability of Single-Cell Analysis using Microfluidics; 2.4.2 How Microfluidics will Expand the Application-Space for Single-Cell Analysis; 2.4.3 Outstanding Hurdles for Genome-Wide Analysis of Single Cells; 2.4.4 Prospects for Clinical Applications of Microfluidic Single-Cell Analysis; Keywords and Definitions; References; Chapter 3 Cellular Immunophenotyping: Industrial Technologies and Emerging Tools; 3.1 Cellular Immune Status and Immunophenotyping; 3.2 Surface Marker Phenotyping 3.2.1 Multicolor Flow Cytometry 3.2.2 Commercial Flow Cytometers; 3.2.3 High-Content Imaging Cytometry; 3.2.4 Current Limitations and Further Development of Flow Cytometry; 3.3 Functional Phenotyping; 3.3.1 ELISpot Technologies; 3.3.2 Multiplexed Immunoassays; 3.3.3 Emerging Single-Cell Technologies; 3.4 Conclusion; Keywords and Definitions; References; Chapter 4 Microsystem Assays for Studying the Interactions between Single Cells; 4.1 Introduction; 4.2 Advantages of Single-Cell Analysis over Conventional Assay Systems; 4.3 Analysis of Cell-Cell Communication between Pairs of Single Cells 4.3.1 Integrated Microfluidic Coculture Systems and Microwell Arrays
