

1. Record Nr.	UNINA9910810804003321
Autore	Praag Herman M. van (Herman Meir), <1929->
Titolo	Stress, the brain and depression / / H.M. Van Praag, E.R. De Kloet, J. Van Os
Pubbl/distr/stampa	Cambridge, UK ; ; New York, : Cambridge University Press, 2004
ISBN	1-107-14237-7 1-280-47755-5 9786610477555 0-511-19495-1 0-511-19561-3 0-511-19352-1 0-511-31402-7 0-511-54442-1 0-511-19426-9
Edizione	[1st ed.]
Descrizione fisica	1 online resource (xii, 283 pages) : digital, PDF file(s)
Altri autori (Persone)	KloetE. R. de OsJ. van (Jim van)
Disciplina	616.85/27071
Soggetti	Depression, Mental - Pathogenesis Stress (Physiology) - Complications Brain - Effect of stress on
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Cover; Half-title; Title; Copyright; Contents; Preface; 1 Diagnosing depression; 2 Traumatic life events: general issues; 3 Life events and depression: preliminary issues; 4 Life events and depression: is there a causal connection?; 5 Genetics of depression; 6 Gene-environment correlation and interaction in depression; 7 Monoamines and depression; 8 Stress hormones and depression; 9 Stress, the brain and depression; Epilogue; Name index; Subject index
Sommario/riassunto	Can traumatic life events cause depression? Studies generally point to a connection between adverse life events and depression. However, establishing a causal rather than associative connection, the key concern of this book, is more problematic. What neurobiological

changes may be induced by stress and depression, and to what extent do these changes correspond? The authors structure their examination around three major themes: the pathophysiological role of stress in depression; whether or not a subtype of depression exists that is particularly stress-inducible; and, finally, how best to diagnose and treat depression in relation to its biological underpinnings.
