Note generali Nota di bibliografia Includes bibliographical references and indexes. Nota di contenuto pt. 1. Complexities in latent variable modeling -- pt. 2. Drawing meaning from latent variable models. Sommario/riassunto This book presents recent developments in the theory and application of latent variable models (LVMs) by some of the most prominent researchers in the field. Topics covered involve a range of LVM frameworks including item response theory, structural equation modeling, factor analysis, and latent curve modeling, as well as various non-standard data structures and innovative applications. The book is divided into two sections, although several chapters cross these content boundaries. Part one focuses on complexities which involve the adaptation of latent variables models in research
