

1. Record Nr.	UNINA9910810999603321
Titolo	Data analytics and AI // edited by Jay Liebowitz
Pubbl/distr/stampa	Boca Raton, Fla., : CRC P., 2020
ISBN	1-00-301985-4 1-000-09467-7 1-003-01985-4 1-000-09465-0
Edizione	[1st ed.]
Descrizione fisica	1 online resource xv, (242 p.) : ill
Collana	Data analytics applications
Altri autori (Persone)	LiebowitzJay
Disciplina	001.422028563
Soggetti	Statistics - Data processing Artificial intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	An Auerbach Book.
Nota di contenuto	1 Unraveling Data Science, Artificial Intelligence, and Autonomy -- 2 Unlock the True Power of Data Analytics with Artificial -- 3 Machine Intelligence and Managerial Decision-Making -- 4 Measurement Issues in the Uncanny Valley: The Interaction between Artificial Intelligence and Data Analytics -- 5 An Overview of Deep Learning in Industry -- 6 Chinese AI Policy and the Path to Global Leadership: Competition, Protectionism, and Security -- 7 Natural Language Processing in Data Analytics -- 8 AI in Smart Cities Development: A Perspective of Strategic Risk Management -- 9 Predicting Patient Missed Appointments in the Academic Dental Clinic -- 10 Machine Learning in Cognitive Neuroimaging -- 11 People, Competencies, and Capabilities Are Core Elements in Digital Transformation: A Case Study of a Digital Transformation Project at ABB -- 12 AI-Informed Analytics Cycle: Reinforcing Concepts -- Index.
Sommario/riassunto	Analytics and artificial intelligence (AI), what are they good for? The bandwagon keeps answering, absolutely everything! Analytics and artificial intelligence have captured the attention of everyone from top executives to the person in the street. While these disciplines have a relatively long history, within the last ten or so years they have exploded into corporate business and public consciousness.

Organizations have rushed to embrace data-driven decision making. Companies everywhere are turning out products boasting that "artificial intelligence is included." We are indeed living in exciting times. The question we need to ask is, do we really know how to get business value from these exciting tools? Unfortunately, both the analytics and AI communities have not done a great job in collaborating and communicating with each other to build the necessary synergies. This book bridges the gap between these two critical fields. The book begins by explaining the commonalities and differences in the fields of data science, artificial intelligence, and autonomy by giving a historical perspective for each of these fields, followed by exploration of common technologies and current trends in each field. The book also introduces readers to applications of deep learning in industry with an overview of deep learning and its key architectures, as well as a survey and discussion of the main applications of deep learning. The book also presents case studies to illustrate applications of AI and analytics. These include a case study from the healthcare industry and an investigation of a digital transformation enabled by AI and analytics transforming a product-oriented company into one delivering solutions and services. The book concludes with a proposed AI-informed data analytics life cycle to be applied to unstructured data.
