a CSS3 transition autonav template -- What just happened? -- Have a go hero - create more transitions -- Building a drop-down navigation. Time for action - creating a SooperFish template.

Sommario/riassunto

This is a beginner's guide, which takes a clear, step-by-step approach to guide you through the process of creating and adding functionality to your site. This book is ideal for developers experienced with HTML and CSS and possibly PHP as well as JavaScript, who would like to build their first site with Concrete5. Some knowledge of PHP, MySQL, or HTML would be useful, but no experience with Concrete5 is expected.
