Sommario/riassunto	In Reconciling Indo-European Syllabification , Adam Cooper brings together two seemingly disparate phenomena associated with Indo-European syllable structure: the heterosyllabic treatment of medial

consonant clusters, which tolerates CVC syllables, and the right-hand vocalization of sonorants, which ostensibly avoids them. Operating from a perspective that is simultaneously empirical, theoretical, and historical in nature, he establishes their compatibility by crafting a formal analysis that integrates them into a single picture of the reconstructed system. More generally, drawing on evidence from Vedic, Greek, and Proto-Indo-European itself, Cooper demonstrates the continued relevance of the ancient Indo-European languages to contemporary linguistic theory, and, moreover, reaffirms the value of the syllable as a unit of phonology, necessary for these languages' formal representation.
