V -- W -- Z.

Sommario/riassunto

We are still only beginning to understand the increasingly complex set of interdependencies among gender, health and globalization. This book brings together a diverse group of distinguished scholars and activists to explore the new risks and freedoms for men and women in a global society and their health determinants. They map the gendered impact of these processes and present a health landscape that takes us beyond nation states into trans-border flows of capital, people, goods and services. Each chapter begins with a global analysis of specific trends followed by two 'In Perspective' pieces by authors from contrasting disciplines and geographies.
