

1. Record Nr.	UNINA9910811437803321
Titolo	Integrated design of alternative technologies for bulk-only chemical agent disposal facilities // Committee on Review and Evaluation of the Army Chemical Stockpile Disposal Program, Board on Army Science and Technology, Commission on Engineering and Technical Systems, National Research Council
Pubbl/distr/stampa	Washington, D.C., : National Academy Press, c2000
ISBN	0-309-17188-1 0-309-51621-8
Edizione	[1st ed.]
Descrizione fisica	1 online resource (xv, 42 pages) : illustrations
Collana	The compass series
Disciplina	355.6/2137
Soggetti	Chemical weapons - United States Chemical agents (Munitions) Decontamination (from gases, chemicals, etc.) Explosive ordnance disposal Hazardous wastes - Incineration - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	""Front Matter""; ""Preface""; ""Acknowledgments""; ""Contents""; ""Figures and Tables""; ""Acronyms""; ""Executive Summary""; ""1 Introduction""; ""2 Acquisition Design Package Processes and Modifications""; ""3 Supercritical Water Oxidation Process for the Treatment of VX Hydrolysate""; ""4 Management of Process and Nonprocess Wastes""; ""5 Agent and Nonagent Monitoring and Measurements""; ""6 Risk Management""; ""References""; ""Appendix A Process Description for the Aberdeen Chemical Agent Disposal Facility"" ""Appendix B Process Description for the Newport Chemical Agent Disposal Facility"" ""Appendix C Biographical Sketches of Committee Members""
Sommario/riassunto	The US Army is pilot testing chemical hydrolysis as a method for destroying the chemical agents stockpiled at Aberdeen, Maryland, and Newport, Indiana. This title focuses on the overarching issues in the process designs integrating individual processing steps, including

potential alternative configurations and process safety and reliability.
