1. Record Nr. UNINA9910811510603321 Autore Johnson William H. A. Titolo Innovation in China: the tail of the dragon / / William H.A. Johnson New York, New York (222 East 46th Street, New York, NY 10017):,: Pubbl/distr/stampa Business Expert Press, , 2015 1-60649-441-4 **ISBN** Edizione [First edition.] Descrizione fisica 1 online resource (158 p.) International business collection, , 1948-2760 Collana Disciplina 338.0640951 Technological innovations - China Soggetti Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Note generali Description based upon print version of record. Nota di bibliografia Includes bibliographical references (pages 127-137) and index. Nota di contenuto 1. Tail of the dragon, interpreting innovation in China -- 2. A historical perspective on innovation in China -- 3. Economic perspective on innovation in China -- 4. A political perspective on innovation in China -- 5. Legal perspective on innovation in China -- 6. Educational perspective on innovation in China -- 7. A cultural perspective on innovation in China -- 8. Innovation as a middle way for the Middle Kingdom? -- Notes -- References -- Index. A word often used today regarding China is innovation, as if the Sommario/riassunto concept were new to the eastern country. Most people know, however, that China was a juggernaut in creating new technologies and at one time was the innovation king of the world--but that was at least seven centuries ago! Today, the great oriental power is attempting once again to take the throne of innovation for its own. But this desire to usurp the throne, which had been diligently taken by the West during the Scientific Revolution, has placed an almost unrealistic emphasis on innovation. In Innovation in China: The Tail of the Dragon, Professor Johnson explores the issues and actors involved in making innovation the emphasis in China. He uses a simple systems model of innovation and various perceptual lenses. The lenses are aimed at the historical, economic, political, legal, educational and cultural elements of an innovation-based society. All of these elements are intimately related to each other in an effective innovation system. After various travels he

has made to China and research on the subject, Dr. Johnson questions whether the push towards proactive self-sustaining innovation has

been effective to date and prognosticates where it may be going. He cautions that although innovation is the "tail that wagged the dog" and is driving a lot of business and political activities in China these days, the dragon is awakened and that the rest of the world must take China seriously as an innovation power. After reading the book, the reader will understand more about how innovation is happening in China and by whom. More importantly, the reader will begin a journey of learning more about where the country is going as it relentlessly continues its drive to create an innovation-based society and to become once again, in terms appropriate to its history, the emperor of innovation.
