

1. Record Nr.	UNINA9910811578003321
Autore	Saito Nobuhiko
Titolo	The physical foundation of protein architecture // Nobuhiko Saito, Yukio Kobayashi
Pubbl/distr/stampa	Singapore ; ; River Edge, N.J., : World Scientific, c2001
ISBN	1-281-95657-0 9786611956578 981-281-101-X
Edizione	[1st ed.]
Descrizione fisica	1 online resource (156p.) : illustrations
Altri autori (Persone)	KobayashiYukio
Disciplina	572.6
Soggetti	Proteins - Structure Biomolecules - Structure
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. 135-142) and index.
Nota di contenuto	Generalities: helix-coil transition in polypeptide; some aspects of protein folding. Mechanism of protein folding: island model; a-helical proteins; lysozyme and phospholipase; bovine pancreatic trypsin inhibitor; flavodoxin and thioredoxin; ferredoxin. Folding of a protein of unknown structure: ab initio method of prediction of protein structure; search for the conformation of minimum energy. Topics related to protein structures: phase transition; module; molecular chaperones; membrane proteins; structure prediction based on protein data.
Sommario/riassunto	This work elucidates the mechanism of various processes in protein folding. The main features of protein folding are shown to be described by the island model with long range hydrophobic interaction which is capable of finding the specific residue, and the lampshade criterion for disulfide bonding.
