Sommario/riassunto

A volume in the popular FactsBook Series, the First Edition of The Leucocyte Antigen FactsBook was hugely successful. The new Second Edition has been completely revised, updated, and expanded by 65% to include new findings and up-to-date key references. The introductory chapters have also been updated, especially in terms of nomenclature, the role of the World Wide Web, and new structural data. The Leucocyte Antigen FactsBook, Second Edition contains more than 200 entries, with approximately 70 new entries, on all the molecules specifically expressed in the surface of cells of the haematopoietic system, including all characterized CD antigens, antigen receptors, MHC antigens, adhesion molecules, and cytokine receptors. This FactsBook will be of enormous value to immunologists, cell biologists, biochemists, and endocrinologists.
